WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Buy a threaded 1 1/8 in steel fork with a separate forged crown (the roadster type), steerer at least 250 mm long.

Saw both legs off flush with the underside of the crown; file flat.

Drill two 9 mm holes up through the crown, 32 mm either side of the steerer, on the line of the legs. Use the drop arm as the template.

Cut the steerer to suit the headset stack (about 245 mm above the crown race seat) and fit a tall quill stem (about 350 mm).

Fit: the crown sits under the lower yoke; the drop arm bolts under it.

Check: the steerer turns freely in the head tube once the headset is adjusted, with no play.
